DETAILED ACTION

1. Applicant's election without traverse of species a (claims 1-8) in the reply filed on 01/13/2005 is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Drawings

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: the reference number 101. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either

"Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

5. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the polarization panel disposed above the selective reflection panel must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Art Unit: 2871

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 7. Claims 1-2 and 4-5 are rejected under 35 U.S.C 102(e) as being anticipated by Yamamura, US Patent Application Publication No. 2003/0067565.

The above claims are anticipated by Yamamura's figure 3 and accompanying text which disclose a liquid crystal display (LCD) device comprising:

- . a lower substrate (112) having a microstructure (reflective dots 160);
- . a light source (170);
- a selective reflection panel and a polarization panel (color filter 114, polarizing plate 15, see page 2, [0033]);
 - . a reflection panel (190).

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/624,541 Page 5

Art Unit: 2871

9. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamura, US Patent Application Publication No. 2003/0067565.

Regarding claim 3, Yamamura discloses the claimed invention as described above except for the position of the polarization plate being disposed between the microstructure and the reflection panel. It would have been obvious to one skilled in the art at the time of the invention was made to dispose a polarization plate between a microstructure and a reflector instead of above the microstructure, since it has been held that rearranging parts of an invention involves only routine skill in the art for the purposes of utilizing polarized light for a display.

10. Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamura, US Patent Application Publication No. 2003/0067565, in view of Ochiai, US Patent 6,196,691.

Regarding claims 6-8, Yamamura discloses the claimed invention as described above except for a holographic pattern having a diffraction grating with interval of not greater than 2µm. Ochiai does disclose a holographic pattern as a microstructure forming in the rear of the light guide plate and having a diffraction grating with the interval (grating constant) of 0.1 to 10µm (see col. 7, lines 38-45). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ a holographic pattern with a interval grating of less than 2µm as shown by Ochiai in order to obtain a uniform, high-brightness light guide plate (col. 4, ln. 62).

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
